DETAILED ACTION

Response to Amendment

1. This communication is responsive to the applicant's amendment filed on 10/14/2008. The applicant(s) amended claim 58, and cancelled claims 1, 3-5, 8-25, 27, and 83-87 (the amendment: pages 2-14).

The examiner withdrew the previous claim rejection under 35 USC 112 1st, because the applicant cancelled the corresponding claim(s).

The examiner withdrew the previous claim rejection under 35 USC 103, because the applicant cancelled the corresponding claim(s).

Allowable Subject Matter

2. Claims 29, 31, 33, 36-49, 51-56, 58, 60 and 63-81 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent **claims 29 and 56**, the instant application is directed to a system and computer usable medium for receiving input sequences entered by a user and generating a phrase comprising one or more ideographic (Chinese) characters as an output. Each of the independent claims, combining some well known features in the art, identifies the uniquely distinct features of:

a reduced keyboard input device having a plurality of input means, each of said input means being associated with at least one of a plurality of strokes and a plurality of phonetic characters, an input sequence being generated each time an input means is

selected by said user, wherein the generated input sequence has an interpretation that is ambiguous due to the plurality of strokes or phonetic characters associated with each input means;

an input method specific database containing at least one of a set of stroke sequences corresponding to input sequences and a set of phonetic sequences corresponding to input sequences;

an ideographic database containing all of:

a set of ideographic character sequences; an ideographic index for each element of said set of ideographic character sequences; a plurality of stroke indices corresponding to said set of stroke sequences; and a plurality of phonetic indices corresponding to said set of phonetic sequence, wherein each sequence represents a phrase comprising two or more ideographic characters;

prioritizing stroke or phonetic sequences that match an input sequence and prioritizing ideographic character sequences that match a stroke or phonetic sequence according to a linguistic model, said linguistic model further comprising use of grammar of the surrounding sentence; and

an output device for displaying one or more found stroke, or phonetic sequences, and one or more phrases corresponding to said found stroke or phonetic sequences, wherein said output device simultaneously displays all of: a text region displaying text entered by the user, a phonetic Pinyin spelling selection list, and a Chinese phrase selection list, wherein each phrase of said a Chinese phrase selection list comprises two or more ideographic characters.

3. The prior art of record, WILLIAMS (2003/0144830 A1) in view of MARX et al. (US 6,173,266 B1), NI et al. (6,822,585 B1), KRAFT et al. (US 2003/0017858 A1), CHEN (US 6,073,146), LEE et al. (US 6,848,080 B1), ZHANG et al. (US 5,197,810) and KIM (US 2007/0106492 A1), provided numerous teachings and techniques of processing input sequences and converting them into ideographic text (characters), including using reduced keyboard such as keypad on mobile telephone to enter phonetic spelling letters (such as Pinyin) and/or stroke-based sequences and then converting them into written form of an ideographic language (such as Chinese character sequences), providing associated input interpretation logic and database and supporting different context modes, using dictionary and listing candidate characters for ambiguous/alternative selection, providing standard ideographic database having necessary index(es) for accessing ideographic characters through interpreted input phonetic/stroke sequences, specifying a message unit that can be a character, a word, a phrase (multiple ideographic characters), showing a selection of candidates based on the occurrence frequency of characters in everyday language, and displaying input history, the candidate characters and the candidate component symbols; providing semantic adjustments for adaptive speech recognition by using semantic models; providing Chinese input dictionary for mapping phonetic (such as Pinyin or Bopomofo) and/or stroke (such as Wubizixin, i.e. five-stroke) sequences to Chinese characters, and using predictive method for input of Chinese characters; displaying possible candidates strings and highlighting some of them and using hard or soft separator for the character string; using accent structure handling dialect/accent problem for phonetic input; providing type model to generate a list of probable typing candidates based on typing error

probabilities and suggesting handling some phonetic confusions/ambiguities caused by dialect/accents of certain groups of users; providing Fuzzy auxiliary input method for predicting and displaying (i.e. using "Lian-Xiang" method) a list of possible candidates of one or more selective characters and using fuzzy key (wildcard key) for Pinyin/Chinese characters input selection; providing syllable-based initial code of Chinese for entering/input phonetic sequences (such as Pinyin). However, the combined features stated above, are not anticipated by, nor made obvious over the prior art of the record.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
